

Operational and Procurement Requirements

This two-day course is designed to provide participants with the skills and knowledge to effectively define and manage operational and procurement requirements using the E2ERM (End-to-End Requirements Management) framework. The course will cover key areas such as understanding operational requirements, analyzing operational processes, and conducting business technology landscape assessments.

Course Objectives

- Develop a deep understanding of operational requirements and their integration into business and technical solutions.
- Utilize architectural models, including operational process analysis and business technology landscape assessments to optimize operations.
- Learn how to harvest functional, non-functional, data, and rule requirements to support comprehensive project planning.
- Gain the knowledge needed to support the procurement process, including developing and managing Requests for Proposals (RFPs).

***Intend for** Change Leaders, Program / Project Managers, Change Management Practitioners, Business Analysts, Business Architects

Agenda

▾ Module 1 | Understanding Operational Requirements

- Overview of operational requirements and their significance in driving business and technical solutions.
- Recognizing the connection between operational needs and organizational strategy.

▾ Module 2 | Operational Process Analysis

- Techniques for analyzing and optimizing operational processes.
- Aligning operational processes with organizational objectives to improve efficiency and effectiveness.

▾ Module 3 | Business Technology Landscape Analysis

- Assessing the current technology landscape to identify gaps and opportunities.
- Leveraging technology to support operational needs and enhance organizational performance.

Course Materials

As a course participant, you will gain access to:

- The program workbook and handouts (if available)
- Two-year access to our training platform, where you'll be able to revisit course materials and presentations
- Early access to whitepapers, videos, webinars, and blogs

Credits

Credits from the following organizations are available by completing this program:

▾ Module 4 | Harvesting Comprehensive Requirements

- Approaches to gathering functional, non-functional, data, and rule-based requirements.
- Ensuring comprehensive project planning through effective requirements management.

▾ Module 5 | Supporting the Acquisition Process (Request for Proposal - RFP)

- Aligning requirements with the acquisition process.
- Developing and managing effective RFPs to support procurement goals.

▾ Module 6 | Applying Concepts to Real-World Challenges

- Case studies and practical applications of course concepts.
- Addressing specific operational and procurement challenges using the E2ERM framework.

▾ Module 7 | Discussion and Practical Application

- Applying E2ERM concepts to real-world scenarios.
- Engaging in interactive discussions to reinforce learning and address challenges.

Program Benefits

✓ Get your training via Flexible Learning Options

Explore our performance-focused training and certification paths in virtual-live, on-demand, or in-person settings. No matter your chosen format, engage with peers, join focused sessions, and more.

✓ Develop a Comprehensive Skill Set for Your Desired Area

Our programs cover strategy, planning, and execution. With over 20 years in the public sector, we guarantee your team excels in decision-making and gains sector-specific expertise.

✓ Deliver Efficient Solutions for Your Agency

Elevate your performance management capabilities to enhance project efficiencies and provide performance-based solutions to citizens.
